

For your initial riding practice, operate the ATC in low gear. Defer higher speeds until you are confident of your proficiency. Practice turning the ATC at slow, constant speeds.

Steer in the direction of the turn, and lean your body to the inside of the turn, while supporting your weight on the outer foot peg. Use the throttle to maintain power throughout the turn.

This technique allows the ATC to lean slightly toward the outside, altering the balance of traction between the rear wheels sufficiently to let them negotiate the turn.

Once this technique is learned, turning maneuvers can be performed within a relatively small area.
