

When the hydraulic brake system has been drained, fill as outlined below:

- a. Fill the fluid reservoir.
- b. Open the bleeder valve one-half turn, squeeze the brake lever, (or depress the brake pedal) close the valve and release the brake lever. This procedure must be repeated in this sequence until hydraulic fluid begins to flow through the bleeder hose. After filling the hydraulic system with fluid, proceed with the actual bleeding operation.

**CAUTION:**

- \* Use only DOT 3 brake fluid from a sealed container.
- \* Do not mix brake fluid brands and never re-use the contaminated fluid which has been pumped out during brake bleeding, because this will impair the efficiency of the brake system.
- \* Brake fluid must be handled with care because it will damage paint and instrument lenses.
