

STARTING THE ENGINE

WARNING: Exhaust gases contain poisonous carbon monoxide. Never run the engine in a closed garage or confined area.

1. Turn the fuel valve to ON.
2. Set the transmission in Neutral.
3. Pull the choke lever (1) up all the way to Fully closed. Do not use the choke when the engine is warm.

NOTE: Since the engine decompression system is interlocked with the kickstarter, a quick, vigorous kick from the top of the stroke is most effective.
