

Starting & Stopping the Engine

Always follow the proper starting procedure described below.

For your safety, avoid starting or operating the engine in an enclosed area such as a garage. Your ATV's exhaust contains poisonous carbon monoxide gas which can collect rapidly in an enclosed area and cause illness or death.

Preparation

(1) fuel valve

(2) ignition switch

(3) neutral indicator

(4) engine stop switch

1. Before starting, select a level surface and lock the parking brake (page 30).
2. Turn the fuel valve (1) and ignition switch (2) to ON.

Confirm the following:

- The transmission is in neutral, and the neutral indicator (3) is ON.
- The engine stop switch (4) is set to RUN ().

The high oil temperature indicator should go off a few seconds after the engine starts.
