

# Load Limits & Guidelines

---

## Load Limits

Following are the load limits for your ATV:

There are limits to how much weight can be carried on your ATV and be pulled in a trailer.

The following load limits apply to standard equipment only. Modifying your ATV, using non-standard equipment, or riding on terrain that is not flat and smooth could further reduce these limits.

**maximum weight capacity**      **ED type: 187 kg (412 lb)**  
    **U type: 220 kg (485 lb)**  
 (includes the weight of the rider, all cargo, and accessories.)

**front cargo rack weight limit**   = 30 kg (66 lb)  
**rear cargo rack weight limit**   = 60 kg (133 lb)  
**tow weight limit**                    = 385 kg (850 lb)  
 (Combined weight of the trailer and all cargo in the trailer)

**tongue weight**                        = 14 kg (30 lb) recommended  
 (Weight on the trailer tongue)

**tongue and rear cargo weight** = 60 kg (133 lb) maximum  
 (Combined weight on the trailer tongue and on the rear cargo rack)

Tongue weight can be measured with an ordinary bathroom scale. Place the scale under the tongue, using either a tongue jack or other support to keep the trailer level.

The weight of added accessories will reduce the maximum cargo weight you can carry.
