

Fuel Valve

LEFT SIDE

ON

OFF

RES

(1) fuel valve

The manual fuel valve is located on the left side under the fuel tank.

The three-way fuel valve is used to control the flow of fuel from the fuel tank to the carburetors.

ON—normal position for riding.

OFF— for parking, storing, or transportation.

RES— for extra fuel to get to a gas station for refueling.

Automatic Fuel ON-OFF

With the fuel valve set to ON (or RES), fuel flows to the carburetors only when the engine is being started or is running. A diaphragm shuts off fuel flow when the engine is turned off.

Reserve Fuel

Remember to check that the fuel valve is in the ON position each time you refuel. If the valve is left in the RES position, you may run out of fuel with no reserve.

For complete information about fueling your motorcycle, see page 74 .
