

Rear Brake Adjustment

Rear brake pedal free play, measured at the tip of the rear brake pedal ①, should be maintained at **0.8–1.2 in. (20–30 mm)**. Free play is the distance the brake pedal moves before the brake starts to engage.

① Rear brake pedal

1. Adjust the static position of the brake pedal to suit the rider by adjusting the pedal stopper bolt ③.
2. Adjust the pedal free play by turning the rear brake adjusting nut ②. Turning the adjusting nut in direction **A** will decrease the brake pedal free play and turning the nut in direction **B** will increase the play.
