

### CAUTION

- \* *Do not shift gears without disengaging the clutch and closing the throttle. The engine and drive train could be damaged by overspeed and shock.*

### WARNING

- \* *Do not downshift when traveling at a speed that would force the engine to overrev in the next lower gear, or cause the rear wheel to lose traction.*

### NOTE:

- \* The battery will not charge while the engine speed is below 1,500 rpm. Avoid idling for prolonged periods.

### CAUTION

- \* *Do not tow the motorcycle or coast for long distances while the engine is off. The transmission will not be properly lubricated and damage may result.*
