

## CARBURETOR INSTALLATION

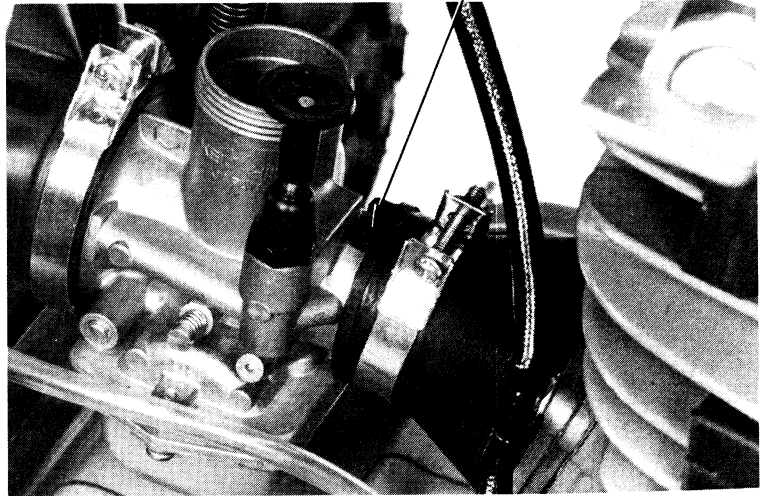

Carburetor installation is essentially the reverse order of removal.

### NOTE

Align the lug on the carburetor with the groove of the carburetor insulator band.

Tighten the insulator and connecting tube band screws.

CARBURETOR INSULATOR

Slide the throttle valve into the carburetor body.

### NOTE

Align the groove in the valve with the stop screw on the carburetor body.

Hand-tighten the carburetor top.

### CAUTION:

*Hand-tighten the top until it is just snug, not tight. Overtightening could damage the carburetor. Do not use tools to tighten the carburetor top.*

Adjust the carburetor after installation. (Page 2-8)
