

Accessory (ACC) Terminal

For your convenience, your motorcycle is equipped with an accessory (ACC) terminal and optional accessory socket. The terminal and socket provide 12V DC power for electrical accessories. When both terminal and socket are being used, the combined power rating of each accessory should be 60 watts (5 amps) or less. Before installing any accessories, read *Accessories and Modifications*, [page 4](#).

If you install any accessories, check the battery frequently to determine the state of charge. Higher current demands may blow a fuse or discharge the battery. For more information, see *Battery*, [page 209](#), and *If a Fuse Blows*, [page 244](#).

Connect accessory electrical leads securely, and keep them insulated, away from hot parts and sharp edges.
