

Side Nets

Your Honda SXS is equipped with side nets to prevent branches, or other debris from getting inside the driver's compartment, and to keep the driver's and passenger's hands and arms inside the occupant protective structure (OPS) if the vehicle ever tips or overturns.

The side nets are secured to the OPS with side net D-rings and side net buckles. To function properly, the side nets should be tight. If a side net is loose, tighten the belts on the side net D-rings.

Be sure the side nets are properly latched before driving your Honda SXS, and never remove side nets from the vehicle. Inspect the condition of the side net and its mounting hardware. If there is wear, deterioration, damage, or they do not latch and tighten securely, see your dealer for repair or replacement.
