## Shift Paddles

Your Honda SXS is equipped with a pair of shift paddles that are located behind the steering wheel.

downshift paddle(-)

upshift paddle(+)

Pull the upshift paddle (+) to shift to a higher gear position and the downshift paddle (-) to shift to a lower gear position and R (reverse).

In MT mode, the shift paddles are used to change gears while driving the SXS.

In AT mode, you can drive the SXS without operating the shift paddles. You can also operate the shift paddles to temporarily change the gear position.

See *Shifting Gears*, page 68.
