

# Answer Back System

The answer back system is a device to find the position of your scooter and to inform you that the immobilizer function of the Honda SMART key system is activated. When you press the answer back button on the Honda SMART Key with the ignition switch  (Off) or  (Lock), your scooter informs you of its location and activation of the immobilizer function by blinking the turn signal light, ringing the buzzer and lighting the ignition switch ring. The ignition switch ring will light for about 1 minute.

The answer back system uses low-intensity radio waves. It may affect medical equipment such as a cardiac pacemaker.
